Charter school applicants and protesters crowd the School Reform Commission meeting Wednesday. (Kimberly Paynter/WHYY)

BY *NEWSWORKS STAFF*

FOLLOW CONTACT

The Philadelphia School Reform Commission is in the process of listening to testimony that will ultimately be used this evening to decide the fate of 39 applicants hoping to start charter schools in the city.

WHYY's Kevin McCorry took a break from the action to join NewsWorks Tonight live and give host Dave Heller an update.

When McCorry visited Newsworks Tonight, the SRC was about halfway through hearing 78 speakers, each giving three minutes of testimony to argue for or against a new charter school. The divide, McCorry said, is between the potential of a successful new school and costs that would be added onto a district that's already hurting financially.

Will all that testimony make a difference? McCorry spoke to SRC Chairman Bill Green who indicated that the meeting is more of a formality and an opportunity for civic dialogu. According to Green, SRC members essentially have made up their minds.

"They went through hours and hours of official public hearings and testimony gathering over the course of December and January. All of that went into big files in all of the schools. They hashed it out, probably, already in some backdoor meeting," McCorry said. "But you never know. Something really compelling could happen, for or against a certain school that could change someone's mind."

Once the SRC announces its decision, rejected charters have the opportunity to appeal to a state board.

soft Had No Choice But To Purchase ndset Business

Comments

The news that Microsoft has purchased substantial assets from Nokia came as a surprise, but perhaps it shouldn't have. The underlying reason that Microsoft had little choice but to buy Nokia is plain: Nokia had too much control over the Windows Phone platform, and Microsoft could not afford to lose its primacy over its mobile efforts.

How did we end up in this situation? Simple: Microsoft granted Nokia special privileges to adapt Windows Phone to its own preference, ecame the most popular Windows Phone manufacturer. Then it became ndows Phone hardware company. This is where its rights to change Windows s a problem for Microsoft: If Nokia were the only Windows Phone OEM that change the operating system, Microsoft had little control over its own platform. per tools, but if it could not control the user experience, in a real way its m was outside of its own control.

le. Microsoft claims that it wants to work with other hardware providers to build ets. And HTC might stick around, but Microsoft has now cornered its own nit external interest.

Vavuud Wind Meter For Smartphones Contains No Electronics, Delivers Accurate Ground Wind Speed Readings

by Darrell Etherington

Gadgets Startups

Smartphones have a lot of on-board sensors, but do they really have enough? No way, say a slew of recent hardware startups, of which Danish Vavuud is only the most recent. Vavuud is turning to Kickstarter to help build a smartphone-compatible wind meter, one that miraculously contains no electronics and yet still can communicate accurate wind speed measurements wirelessly to iPhones and Galaxy devices. Skype Restores People Hub Integration In Latest Windows Phone Update, Adds HD Video

by Sarah Perez

VC

Skype released an update today for Windows Phone, which restores the "People Hub" integration (Windows Phone's fancy address book) that had been disabled in January due to bugginess and performance issues. Though today's blog post from Skype doesn't directly address the Hub's former problems, it does hint at them by saying that the new release focuses on "increasing quality and reliability." Read More

LEARN MORE BUILD YOUR OWN

In short, the Surface Pro is so good that it could drive Windows 8 adoption with enough force to make people reconsider Microsoft's odd new OS. Microsoft bet the farm on a new paradigm and it needs a champion. Surface Pro is the right hardware for the job.

I haven't been a Surface apologist and, although I've seen Windows 8 as more of a success than a failure, no hardware has truly made me see the value of the platform until this model Surface. But enough effusive praise, let's look at the hardware.

Pro vs. RT

Back in November I noted that Microsoft launched the Surface RT long before the platform was stable or even interesting. The RT, as you'll remember, runs a quad-core Cortex-A9 ARM chip clocked at 1.3 GHz. It's not awful, but it's not great, either.

On first glance, the Surface Pro and Surface RT are virtually identical. But there's more than meets the eye.

This model attempts to right those wrongs by turning the Surface from a "tablet" device into a what essentially amounts to a Windows laptop.

This is an important distinction. The Surface isn't supposed to be a tablet you drop on the coffee table and use when you want to look up something on IMDB. It's a powerful computer with enough speed and graphics chops to give any other manufacturer's laptop a run for its money. Previous Windows tablets have been hampered by a strange and messy amalgam of interfaces, pen input, and a focus on the slate form factor. This device, on the other hand, is a real hybrid – a laptop that is also a tablet that is also a media consumption device. You will use it just like you use a laptop whereas, by definition, the hobbled RT version of the Surface is meant to be used as a tablet.

Hardware

In examining the Surface Pro we must remember that, physically, the Pro is essentially the same device as the Surface RT. It is very slightly thicker at exactly a half inch versus .37 inches for the RT. It is also a half a pound heavier than the 1.5 pound RT.

The system runs an Intel dual-core 1.7GHz Core i5 chip and

About ASIS&T

- About ASIS&T
- What is Information Science?
- Become a Volunteer
- History of ASIS&T
- Awards and Recognition
- Meet Our Board
- Meet Committees & Task Forces
- Meet Our Staff
- History of Information Science
- Meet Our Members

The Association for Information Science and Technology (ASIS&T) is the only professional association that bridges the gap between information science practice and research. For over 75 years, ASIS&T has been leading the search for new and better theories, techniques, and technologies to improve access to information.

Our members—thousands of researchers, developers, practitioners, students, and professors in the field of information science and technology from 50 countries around the world—have made ASIS&T an important part of their professional development.

Members share a common interest in improving the ways society stores, retrieves, analyzes, manages, archives and disseminates information.

As the preeminent professional association in the field, ASIS&T:

- Provides career development and leadership opportunities through our student chapters and regional chapters
- Connects practitioners, researchers, students, and organizations from throughout the field through special interest groups and at annual events, including the IA Summit and Annual Meetings
- Edits, publishes, and disseminates publications concerning research and development
- Shares important professional education through webinars
- Acts as a sounding board for promotion of research and development and for the education of information professionals

ASIS&T members represent such fields as:

- Information science
- Computer science
- Linguistics
- Management
- Librarianship
- Engineering
- Law
- Medicine
- Chemistry
- Education

ASIS&T supports regional chapters and student chapters throughout the U.S. and abroad, as well as varied special interest groups (SIGs)—diverse professional groups organized by specialty and focus, such as bioinformatics, information architecture, and visualization, images, and sound.

Mission

The mission of the Association for Information Science and Technology is to advance the information sciences and related applications of information technology by providing focus, opportunity, and support to information professionals and organizations.

Vision

Establish a new information professionalism in a world where information is of central importance to personal, social, political, and economic progress by: Advancing knowledge about information, its creation, properties, and use; Providing analysis of ideas, practices, and technologies; Valuing theory, research, applications, and service; Nurturing new perspectives, interests, and ideas; Increasing public awareness of the information sciences and technologies and their benefits to society.

Usability Testing Findings and Recommendations

August 12, 2015

Findings and Recommendations

Using the System Usability Scale methodology, these tests produced a 91 average score out of 100. This means that the participants found the site VERY usable.

Individual test subject scores are

- 87.5 (Prospective undergrad)
- 85 (Prospective undergrad)
- 95 (Prospective parent)
- 90 (Prospective undergrad)
- 95 (Prospective undergrad)
- 97.5 (Prospective parent)
- 92.5 (Prospective grad)
- 90 (Prospective undergrad)

To learn more about the System Usability Scale, go to http://www.usability.gov/how-to-and-tools/methods/system-usability-scale.html.

When asked what grade they would give the site, grades were

- A (Prospective undergrad)
- A (Prospective undergrad)
- B (Prospective parent)
- A (Prospective undergrad)
- A+ (Prospective undergrad)
- B+ (Prospective parent)
- A- (Prosp
- A (Prospe
